EPO-ROK®
DECORATIVE
WALL SYSTEMS

Morritex® Industrial Coating Systems

Fully customizable, high performance coating systems applied at thicknesses from 8 mils to 3/16". Finish, texture, color and performance determined according to specific system needs/requirements. Excellent abrasion, chemical and impact resistance with a variety of finishes offered, including satin, orange peel and gloss.

ESD Flooring Systems

Sika ESD Floor products may be customized to your electrical specifications. All surfaces optimize chemical and abrasion resistance, while providing a durable, easy-to-clean, attractive finish.

Epo-Rok® Epoxy-Based Mortar Flooring

Low VOC epoxy mortar systems used to protect new concrete and to overlay, resurface and repair worn or eroded concrete floors in light- to heavy-duty industrial use. Heat resistant to 150°F. Provides excellent resistance to impact, abrasion and chemical attack. Superior compressive strength.

Quartzite®, Decoflake™, Versacolor®, and Verrazzo® Decorative Flooring Systems

Sika's decorative flooring systems blend colors and textures to produce the appearance of carpet, terrazzo or marble, drawing attention to your floors as design elements. To complete and protect your look, Sika offers various finishes, combining countless creative options with high performance functionality.

Descoglaze® & Glazetite® Wall Coating Systems

Seamless, non-yellowing, high performance architectural wall systems for interior applications. Excellent resistance to abrasion, chemicals, staining, moisture, heat and cold.

And much more...

Ask us about our moisture treatment products, flexible waterproofing membranes, patching and filling materials.

Stands up to aggressive use & chemical exposure

Your floors and walls must be able to withstand the exposures of daily operation within your facility. We offer coatings that stand up to Skydrol® fuels and cleaning chemicals and are tough enough to endure impact from dropped tools and heavy traffic from equipment, vehicles and pedestrians.

Maintains gloss & color

Hangars truly shine with the high gloss, light reflecting finish of Sika's chemical resistant urethanes (CRU). To assure a long-lasting finish that is beautiful for years to come, we offer systems specially formulated to maintain their color and gloss integrity.

Protects work environment against destructive static shock

As electronic technology becomes more prevalent in industry, electrostatic discharge (ESD) threatens operations with costly damage, injury and downtime. Sika ESD flooring systems offer outstanding static control, providing consistent ESD properties across your entire floor with housekeeping costs lower than ESD finishes, tile or waxes.

Provides a slip resistant working surface

Safety is an important consideration, especially in wet areas or those subject to pedestrian traffic. Sika's flooring systems allow you to choose the degree of slip resistance needed to support a safe environment, while still providing a surface that is easy to clean.

Is easy to clean & maintain

Not only are Sika's floor and wall systems compatible with common industrial-strength cleaning products, by choosing a seamless floor system, you also eliminate potential hiding spots—seams, grout lines, crevices—where dirt and other contaminants could collect over time. This added degree of assurance helps maintain your systems' inherent strength and outstanding performance under demanding use. Plus, our systems are virtually maintenance-free with no waxing or stripping required.

Installs with minimal disruption to facility operations

Our environmentally friendly flooring systems produce very little to no odor during installation, allowing completion in spaces adjacent to occupied areas. Plus, we've designed our systems for rapid turnaround, minimizing downtime to quickly restore your facility to its full operation.

Sika... One Name. One Source. Worldwide.
